hold rather than the family. There was no ambiguity about its "living together" aspect; there were many ambiguities about its kinship aspects. To some of these unusual domestic usages we now turn.

Marriage by Betrothal

In many nonliterate societies, including most, if not all of the mainland Australian tribes, there is a tendency to believe that the main purpose in life for a female is to get married. The Tiwi subscribed to this idea, but firmly carried it to its logical conclusion; namely, that all females must get married, regardless of age, condition, or inclination. They (and they almost alone among human societies) took the very slight step from saying "All females *should* be married" to saying "All females *must* be married." As a result, in aboriginal times there was no concept of an unmarried female in Tiwi ideology, no word for such a condition in their language, and in fact, no female in the population without at least a nominal husband. Their own explanation of this unique situation was connected with their beliefs about conception and where babies come from. Anthropologists have long been aware that the Australian aborigines generally (and indeed some of the Melanesians, such as the famous case of the Trobriand Islands) ignored the role of the male in human conception and firmly believed that a woman becomes pregnant because a spirit has entered into her body. The Tiwi were no exception, but went a step further than the mainlanders in dealing with the dangerous situation created by the unpredictability of the spirits. Since any female was liable to be impregnated by a spirit at any time, the sensible step was to insist that every female have a husband *all the time* so that if she did become pregnant, the child would always have a father. As a result of this logical thinking, all Tiwi babies were betrothed before or as soon as they were born; females were thus the "wives" of their betrothed husbands from the moment of birth onward. For similar reasons, widows were required to remarry at the gravesides of their late husbands, and this rule applied even to ancient hags who had already buried half a dozen previous husbands in the course of a long life. It can readily be seen that these rules—prenatal betrothal of female infants and immediate remarriage of all widows—effectively eliminated all possibility of an unmarried female from Tiwi society. They also eliminated any possibility of an unmarried mother or a fatherless child. No matter where the unpredictable spirit chose to create a baby, whether it was in the body of a pretty young woman, a toothless old hag, or a little girl of six or seven, the pregnant female would have a husband, and the children when born would have a father. The Tiwi were thus probably the only society in the world with an illegitimacy rate of zero.

The practical application of these two unusual rules had certain unusual consequences. The rule of prenatal betrothal obviously gave a great deal of power to the person with the right to betroth, and in Tiwi this right belonged

1: Hart & Pilling E-5 (1928-1954) 1960
O120 Tiwi O120

to the husband of the pregnant woman. We carefully say "the husband of the pregnant woman" rather than "the father of the child" because the right resided in the male head of the household at the time of the birth. Although he was ordinarily both the father of the child and the husband of its mother, there were naturally occasions when a child was born after the death of its father, in which case the right of betrothal unquestionably belonged to the mother's new husband. The clearest statement of this rule is to say that the right of betrothal of all newly born females resided in the husband of the mother at the time of the girl's birth. "He who named the child bestowed it."

In most human societies the proportion of males and females in the population is approximately equal, except in the older age-groups where women predominate owing to their tendency to live longer than men. The Tiwi conformed to this norm biologically, but their cultural insistence that all females of every age be married resulted in further unusual features of the domestic situation. No such compulsory marriage was required or expected of males. Hence, the total female population, but only part of the male population, was married. Mathematically this permitted, indeed required, a high degree of plural marriage. The men who held the right to betroth—namely, the fathers of the female babies—could, within certain limits imposed by the kinship system, bestow their about-to-be-born or newly born daughters where they wished, and they certainly did not bestow them on about-to-be-born or newly born males. On the contrary, they bestowed them, generally speaking, where some tangible return was to be anticipated. Put bluntly, in Tiwi culture daughters were an asset to their father, and he invested these assets in his own welfare. He therefore bestowed his newly born daughter on a friend or an ally, or on somebody he wanted as a friend or an ally. Such a person was apt to be a man near his own age or at least an adult man, and hence perhaps forty years or so older than the newly born baby bestowed upon him as a wife. Or, the father might bestow an infant daughter on a man—or some close relative of such a man—who had already bestowed an infant daughter upon him, thus in effect swapping infant daughters. Obviously, the fathers who did the swapping, even if they were not quite the same age themselves, were bound to be many years older than the infant wives they thus received from each other. Or, thirdly, a father looking for a suitable male upon whom to bestow his infant daughter's hand might decide to use her as old-age insurance—in which case he selected as her future husband not one of the older adult men who would be old when he himself was old, but a likely looking youngster "with promise"; that is, a youth in his late twenties or thirties who showed signs of being a good hunter and a good fighting man, and who was clearly on his way up in tribal power and influence. Such a youth, in his late twenties at the time of betrothal, would, with luck, be in his prime as "a big man" in about twenty years—a time when the father of the infant daughter would be getting old and decrepit and much in need of an influential son-in-law who was obligated to him.

There were other bases upon which infant daughters were betrothed,

As mechanisms validating this success of fathers rights

584 592 684 [553] against clan rights there existed two rules: he who bestowed the name had the right to dispose in marriage; and all names given by a woman's previous husband were cancelled by his death and a new set of names given to all her children by her new husband. Strictly and universally enforced, such rules would put *all* control over the marriages of *all* women, of every age, in the hands of their mother's husbands—that is, men from outside the clan of the women being disposed of, in other words, fathers in the Tiwi sense. But the Tiwi system failed to achieve such a result though their rules are pointed toward it. They achieved something close to it as far as infant or even young girls were concerned, since the fellow clansmen of such girls were either (as brothers) too young and unimportant to have any power to resist this alien control over their sisters' hands, or (as mothers' brothers and hence older men) too involved and absorbed in their own activities *as fathers* to take any position asserting clan rights as against fathers' rights. To be successful in tribal life, an ambitious young Tiwi male was best advised to forget his mother and his sisters' daughters (all members of his clan) and concentrate on getting wives for himself. Only by getting wives could he have daughters, and only by having daughters could he build alliances and obtain influence, power, and more wives. To get wives for himself, he could not use his mother or his sisters or his sisters' daughters, since their disposal was in the hands of the men who had named them—that is, their fathers. But there came a time in the life of an older man when his mother was old, and *her* mother was dead, and therefore the rights of the last man to name his mother had lapsed. And a similar situation would arise in the case of his sisters when their mother's last husband died. By this age, a man so situated was likely to be powerful enough and skilled enough in the rules of the game to exert some control over the late remarriages of his elderly sisters and even of his mother, were she still alive. Whenever this occurred, although the resulting situation might have the superficial appearance of clan solidarity—with sons, mothers, brothers, and sisters all acting and planning together as a partnership—such a surface appearance was illusory. The motivations involved in it were scarcely altruistic desires on the part of the brothers to look after their mothers and elderly sisters, but rather efforts by the brothers to use to advantage, in their intricate political schemes, some women of their own clan (their mothers and elderly sisters). Earlier in life these men had been prevented from such manipulation by the control over those women exercised by nonclansmen (their husbands or fathers) through the naming rules. Put another way, we might say that Tiwi men as a group had acquiesced to the system wherein "the father" had control over all marriages of his "daughters," because every Tiwi man hoped to be a "father" himself; but having acquiesced, every Tiwi male tried to beat the system, especially as he became older and more influential, by intriguing in the remarriages of his mother and elderly sisters—matters in which, according to the strict letter of the law, he had no right to interfere, since bestowal rights resided with the "father" or "fathers" of these women. One factor which greatly contributed to the setting aside of the rights involved in the naming system was the fact that since, on the whole, old men married young women

was still a bachelor and why Banana had acted so impulsively and thereby gotten himself in the bad graces of the elders. The two men were the eldest of four brothers without any full sisters and as such they were necessarily handicapped in their career struggle. Elders seeking satellites or contemporaries seeking allies looked askance at men without sisters, for such men could have no sisters' daughters to use in the marriage-arrangements struggle. The mother of Tiberun and Banana was dead, but even were she still alive, few men would have been interested in marrying a widow whose only living children were sons. Widows without daughters and bachelors without sisters rated very low in the scale of desirable assets sought either by elders or by contemporaries.

Tiberun was thus the only bachelor in the 30-42 age group. Of the remainder we select Teapot as an example of another man who failed to get started. Teapot was at least 35, and about seven years previously he had "stolen" a wife from an elder. This wife was no ancient and shop-worn widow like the wife Banana had "stolen," but a young girl who had been betrothed in due form to an elder by her father. How Teapot had managed to get away with her is too complicated an incident to unravel here, and in any case it hadn't done Teapot much good. After presenting Teapot with a baby boy the young woman died, and Teapot, with a now six-year-old son, was more or less an outcast among the Malauila. No elder wanted him as a satellite and none of his contemporaries wanted him as an ally. His mother was dead and his only sister was married to a Munupula elder. This sister in Munupi was his only asset and one which a different man might have used as a means to better himself. But Teapot, instead of using this small asset to get started on a career, had chosen to defy the rules and "steal" an elder's bestowed wife. "Stealing" an old widow was reprehensible conduct in the eyes of the elders; stealing a young bestowed wife was unforgivable. Hence Teapot, since his crime, had received no bestowal, had been able to marry no widow, and was wanted by no one as an ally.

A complete contrast to these two unsuccessful men in their thirties was provided by the case of Gitjara, who was about the same age as Tiberun. Gitjara, it is true, had sisters, and that was always a help. Using his sisters (already married and bearing children to an elder) as bait, Gitjara when he was about 28 proposed an alliance to L. F. B., a rather feeble man about five years older than himself, who was not doing very well in the influence race. The gist of the proposal was that, since both their mothers were still alive and each married to an old man who could not last much longer, Gitjara should marry the ancient mother of L. F. B. when she became a widow, and L. F. B. should marry Gitjara's mother when that old lady became a widow. Perhaps the idea originated with the two old women rather than with either of the young men. Since such arrangements were essentially plots or schemes, it is impossible to determine who conceived them in the first place—old women ambitious to aid their sons or young men ready to use their mothers as long-term gambits to ultimately provide themselves with young wives. Mother-exchange operations were probably first conceived at high-level strategy con-

was entering the junior elder class and, having received wives from other sources than Inglis, was getting to the point where he would soon have free daughters of his own. He had no intention of performing any more services for Inglis who was now nearly sixty. Hence Inglis had not bestowed any daughters on Tomitari since 1923; those of his daughters who had been born since that year were bestowed on men other than Tomitari and men who were younger and less successful than he.

As we see it, the deals involving widows, particularly the pay-offs to young agents for acting to promote the interests of older men, had distorted what might be called the pure theory of Tiwi bestowal. According to the pure theory, mothers' brothers bestowed their daughters on selected sisters' sons, and the older man who gave a young man a wife and became his wife's father, was performing a kindness toward a favorite nephew for which the nephew should be grateful. But the Inglis-Tomitari operation shows how the theory had become distorted in practice. In order that Inglis might have some young daughters whom he would be free to bestow on his favored young nephew, Tomitari, in 1914 he had had to arrange the young man's marriage with an elderly widow to ensure safe delivery to him (Inglis) of some young wives who would bear him those daughters. Everything went smoothly and no slip-up occurred, yet by the time Inglis was in a position to give a wife to his favored young nephew, he found that the latter was no longer a dependent young man but a successful junior elder competing with him in his own field of identifying and using talent among the younger men. Tomitari's first daughter, born in 1927—not to any daughter of Inglis but to an older wife—was bestowed by its father on the distant but very promising Gitjara, a man of thirty-two. Gitjara was thus selected by Tomitari as a promising satellite at about the same age as Tomitari in 1914 had been selected by Inglis. Moreover, Tomitari by this time, far from being the grateful nephew of old Inglis (as the theory stipulated), was looking forward with anticipation to the old man's death, since when that occurred, among the widows of Inglis would be the three sisters of Padimo of whom he was still the nominal father. It was by acting as their step-father when they were children that he had got his own career started. They were indeed the foundation stone of his own career and, having profited so much from them as children, he was keenly interested in their redisposition whenever Inglis' death should put them on the market again. Thus he was simultaneously the husband of some of Inglis' daughters and nominal father of some of Inglis' wives. In the first status, he was expected by the theory to be a grateful son-in-law of Inglis; in the second status, the facts of Tiwi life required him to see Inglis' death as providing him with an opportunity to derive some new benefits for himself from his position as nominal father of the three wives of Inglis whose delivery to Inglis' household he had himself engineered.

Thus the politics of bestowal cannot be separated from the politics of widow remarriage. Every case of one had endless repercussions in the other. Sisters' sons who were promised young wives by their mothers' brothers were always too old to be grateful by the time the bestowal occurred or by the even later time when the bestowed child was old enough to come into residence.

10:Goodale E-5 (1954) 1962 OI20 Tiwi OI20

MoBrSo to be the first husband of a girl is not merely a question of preferential choice; a FaSiSo is actually the only cross-cousin of the appropriate age to be considered as a party to a Type A contract. 582

As a first step, let us consider the expected relative ages of the principal parties to a Type A contract: the mother-in-law, the son-in-law, and the expected daughter-wife. A girl becomes a mother-in-law at puberty. For the sake of convenience we may consider this to be at the absolute minimum age of ten. A boy becomes a son-in-law at an age of not less than ten, and he may well be older than this. The minimum age of a Tiwi male is determined by his physical ability to hunt for and otherwise serve his mother-in-law in order to fulfill his part of the contract. 582 606 [581]

We cannot expect the future daughter and wife to be born, on the average, for at least five years and conceivably not for twenty years after the contract is made. However, again for convenience, let us assume that, on the average, the promised daughter will be born ten years from the date of the contract, i.e., when both the mother and the son-in-law are about twenty years old. The young girl will not become a cohabiting wife for approximately another eight or ten years, at which time her promised husband will be at least 28 to 30 years of age. Thus an average difference of twenty years between the ages of a girl and her first husband is to be expected—a difference which is dictated solely by the form and nature of the initial Type A contract. 582

Hart (1930: 282) believed that this twenty-year age difference was largely a result of the excessive practice of polygyny quite evident in his time (ca. 1930). However, in 1954, when most polygynous households had been broken up, an analysis of age differences for all primary unions for women in my sample still reflected the same disparity. Few men under the age of 30 had received wives, and only one girl over the age of ten had not yet been given to her promised husband. The average age difference between wives and first husbands was 18.9 years, with a range of from three to 54 years (Goodale 1959: 72). [114] [595] [593]

I shall next consider the expected relative ages of parents, siblings, and the children of siblings (cousins). If there is a twenty-year age difference between husbands and wives, it logically follows that the same age difference will also exist between the mothers and fathers of children. A woman can expect to have children by the age of twenty, while a man will not be expected to have legitimate children until about the age of 40. If we assume that siblings are of the same relative age (there being a 50/50 chance that brothers and sisters are older or younger), then we can expect that a sister will, on the average, have a child twenty years before her brother has a child. Thus it can be expected that the FaSiSo of a female Ego will be twenty years older than she is, and that her MoBrSo will be twenty years younger. In arranging the primary marriage of a girl, it is thus virtually impossible that she be promised to a MoBrSo who by expectation is twenty years younger than she, and who indeed is 582 593 582 605
